### Repairs

Cracked or faded paint on wing or any part of the car (Repair)

The paint on my wing was all cracked to hell, so I needed to fix it. You can repair it two ways, with chemicals, or with sandpaper. I chose sandpaper because chemicals are very messy. Just rough up the old paint with 600 grit sandpaper, and spray 2 to 3 coats of paint (most autobody shops can match your paint, and put it into an aerosol can for a small cost). Then use a green pad, scrub until it is smooth, then polish it with a high speed buffer.

The symptoms

Bad looking paint, cracks etc.

The Difficulty

Very easy.

The Problems

Nothing

The Results

Looks like new paint, it wowed me on how nice my car look after it was done.

Time and Cost

It doesn't take that long, I did it while washing my car. I fixed the chips, washed, waxed, and polished my car, which took about 4 hours. As for cost, if you already have a high speed buffer, it will only cost you \$20-30 for touchup paint, sandpaper, etc.
